Subject: One citizen's will for a MDNR decision...

As we face the decision by the Missouri Air Conservation Commission on this coming Thursday, Sept. 24, 2015, I wish to go on record as expressing my deepest preference and strongest voice that the commission's decision be Option 1: non-attainment.
Thank you for considering my citizen's will.

Written and Hearing Statements

To: Missouri Air Conservation Commission in writing subsequent to hearing on August 27, 2015:

I am asking you to choose Option 1:

Ameren Labadie Energy Center

For the area surrounding the Ameren Labadie Energy Center, the Air Program is seeking comment on two options.

Option 1: A recommendation of nonattainment based on air dispersion modeling using actual emissions. The Air Program is proposing a nonattainment area boundary that encompasses all model-predicted violations of the 1-hour SO₂ standard, the Labadie property boundary, and any nearby ambient SO₂ monitors, and that is bounded by easily recognizable and identifiable landmarks. Under option 1, portions of Franklin and St. Charles counties would be recommended nonattainment (Figure 9) as follows:

- The eastern and western boundaries are Boone and Boles Township boundaries.
- The northern boundary is Missouri Route D and Highway 94.
- The southern boundary is Interstate 44.

I also testified at the Jefferson City hearing on August 27, 2015:

My statement approximated the following text:

I have reviewed the scientific and measurement reports as a reasonable and interested citizen.

I just want to go on record as a concerned citizen.

I have lived in Villa Ridge, Franklin County for just over 37 years now.

My wife and I have raised our children and seen our grandchildren grow up in the Villa Ridge and Wildwood areas extending from the Ameren Labadie plant.

Both these areas exceed, that is, violate the SO₂ NAAQS called by for the Clean Air Act, as reported from modeling studies.

I ask this commission to please act in the best interest of our family's health and the health of our neighbors. There is no price you can set on the cost of my family's quality of life and life itself for the utility of supplying energy to our area, much less to providing in for out of state locales. After all, our state motto, if we choose to honor it is: "Salus populi suprema lex esto" - The well-being of the people shall be the supreme law.

Thank you.
